

ABSTRACT

This flexible tubular pipe (1) for transporting fluid in the field of offshore petroleum development, of the type comprising at least one impervious inner polymer sheath (3), one or more reinforcing layers formed from coils of reinforcing wires or of metallic strips or of long composite elements (4, 5, 6), at least one second polymer sheath such as an outer protective sheath (7) or an intermediate sheath (8), is characterized in that said second polymer sheath (7, 8) is made of elastomeric thermoplastic polymer (TPE).
